DETAILED ACTION

Claims 1-18, 20-24 are pending in this application. Amended claims 1-8, 10-18, 20-23 and canceled claim 19 are noted.

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/29/06 has been entered.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1 and 14 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

In claim 1 line 4, the term "parallel surface" is deemed new matter as there is no support for such a limitation in the original specification. However, there does appear to be support for a planar face 78 on p.16 of the specification. The same issue applies to claim 14.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-18, 20-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Maniwa et al. (5,704,978). Maniwa discloses a method of applying a coating material using an extrusion type coating apparatus including a die having a coating material reservoir to which a coating material is supplied, the coating material being coated on a continuously traveling support member while the coating material is extruded from a slit formed in a tip of the die (col.2 lines 38-50). The die 2 has a lip 4 and a slit 5 (col.6 lines 11-28 and Figure 1). A coating liquid supply pipe for supplying the coating material 6 is connected to the coating liquid supply ports which are formed in both the end portions of the pocket 9 (col.6 lines 33-46). Figure 1 shows a parallel surface. The coating material can be polyethylene terephthalate (col.9 line 15).

However, the reference fails to teach a substantially rigid substrate.

It is noted that the substrate is generally a magnetic recording medium as noted in col.4 lines 23-25). However, Maniwa contemplates the use of polymeric substrates as well as metal and ceramic substrate and states that the substrate can be a rigid substrate (col.4 lines 31-49). It would have been obvious to modify Maniwa's apparatus to utilize a rigid substrate with the expectation that the deposition would be successful depending on the desired final product.
